

High Accuracy Ambient Light Sensor With I²C Interface

LINKS TO ADDITIONAL RESOURCES

DESCRIPTION

VEML6031X00 is a high accuracy ambient light digital 16-bit resolution sensor in a miniature opaque 2.67 mm x 2.45 mm package. It includes a high sensitive photodiode, a low noise amplifier, a 16-bit A/D converter and supports an easy to use I²C bus communication interface and additional interrupt feature.

The ambient light result is as digital value available.

APPLICATIONS

Ambient light sensor in automotive for

- Display backlight controls
- Infotainment systems
- Rear view mirror dimming
- Interior lighting control systems
- Head-up displays

FEATURES

- Package type: surface-mount
- Dimensions (L x W x H in mm): 2.67 x 2.45 x 0.6
- AEC-Q100 qualified
- Integrated modules: ambient light sensor (ALS)
- Supply voltage range V_{DD} : 2.5 V to 3.6 V
- Communication via I²C interface
- I²C bus H-level range: 1.7 V to 3.6 V
- Floor life: 4 weeks, MSL 2a, according to J-STD-020
- Low shut down current consumption: typ. 0.5 μ A
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

AMBIENT LIGHT FUNCTION

- Filtron™ technology adaption: close to real human eye response
- Typical ALS output tolerance of $\leq 10\%$ under different light sources
- 16-bit dynamic range for ambient light detection from 0 lx to about 228 klx with resolution down to 0.0034 lx/ct, supports low transmittance (dark) lens design
- Excellent temperature compensation
- High dynamic detection resolution

PRODUCT SUMMARY

| PART NUMBER | OPERATING VOLTAGE RANGE (V) | I ² C BUS VOLTAGE RANGE (V) | AMBIENT LIGHT RANGE (lx) | AMBIENT LIGHT RESOLUTION (lx) | OUTPUT CODE | ADC RESOLUTION PROXIMITY / AMBIENT LIGHT |

APPLICATION INFORMATION

Special care must be taken into consideration when handling the VEML6031X00. VEML6031X00 is sensitive to dust and scratches, proper optical device handling procedures are recommended.

The optical surface of the device must be kept clean for optimal performance in both prototyping with the device and mass production manufacturing procedures. Tweezers with plastic or rubber contact surfaces are recommended to avoid scratches on the optical surface. Avoid manipulation with metal tools when possible. The optical surface must be kept clean of fingerprints, dust, and other optical-inhibiting contaminants.

If the device optical surface requires cleaning, the use of isopropyl alcohol is recommended. A few gentle brushes with a soft swab are appropriate. Avoid potentially abrasive cleaning and manipulating tools and excessive force that can scratch the optical surface.

If the VEML6031X00 performs less than optimally, inspect the optical surface for dirt, scratches, or other optical artifacts.

VEML6031X00 is a cost effective solution of ambient light sensor with I²C bus interface. The standard serial digital interface is easy to access “Ambient Light Signal” without complex calculation and programming by external controller. Beside the digital output also a flexible programmable interrupt pin is available.

1. Application Circuit

Fig. 11 - Application Circuit
(x) = Pin Number

Notes

- The interrupt pin is an open drain output. Proposed values for the pull-up resistors should be > 1 kΩ, e.g. 2.2 kΩ to 4.7 kΩ for the R1 and R2 (at SDA and SCL) and 10 kΩ to 100 kΩ for R3 (at interrupt).

Normally just one decoupling capacitor is needed. This should be ≥ 100 nF and placed close to the V_{DD} pin.

For detailed description about set-up and use of the interrupt as well as more application related information see AN: “Designing VEML6031X00 into an Application”.

2. I²C Interface

The VEML6031X00 has eighteen register addresses responsible for operation control, parameter setup and result buffering. All registers are accessible via I²C communication. Fig. 9 shows the basic I²C communication with VEML6031X00.

The built in I²C interface is compatible with I²C modes “standard” and “fast”: 10 kHz to 400 kHz.

Please refer to the I²C specification from NXP for details.

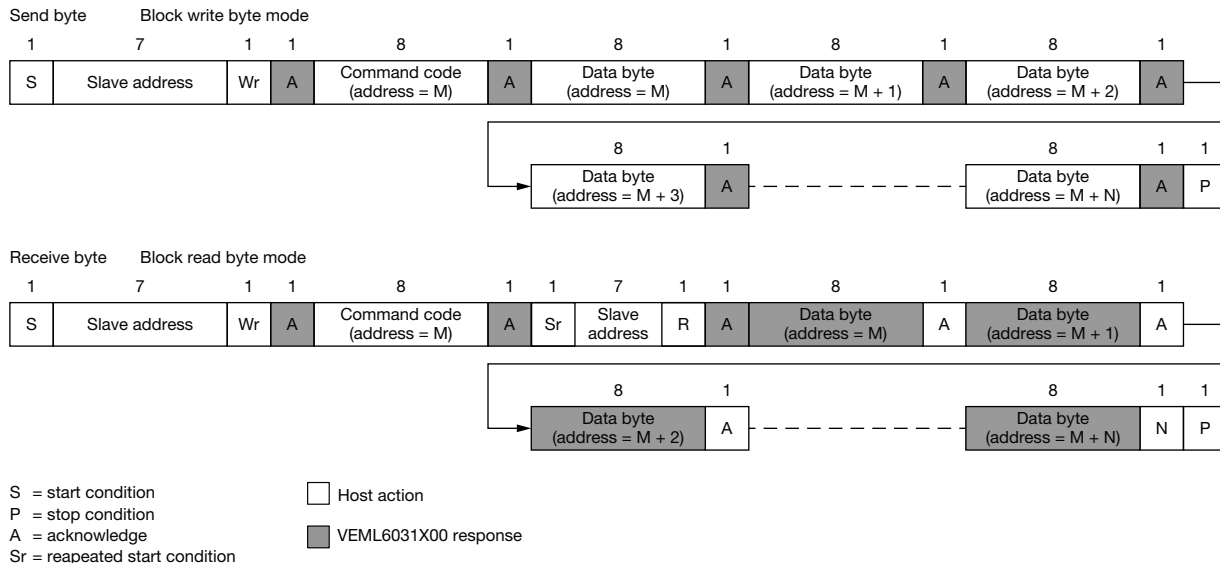

Fig. 12 - Send Byte / Receive Byte Protocol

Device Address

The VEML6031X00 is available in two different pre-configured slave addresses.

For one version the predefined 7 bit I²C bus address is set to 0101001 = 0x29. The least significant bit (LSB) defines read or write mode. Accordingly the bus address is set to 0101 0010 = 0x52 for write and 0101 0011 = 0x53 for read. The second version comes with predefined 7 bit I²C bus address of 0010000 = 0x10, so, here the write address is 0010 0000 = 0x20 for write and 0010 0001 = 0x21 for read.

Register Addresses

The VEML6031X00 has eighteen registers, accessible through their respective 8-bit command codes.

The registers are 0x00 to 0x17 (0x02 and 0x03, 0x08 to 0x0F and 0x16 are not defined / reserved). Note that due to the location of the two shutdown bits (SD and ALS_IR_SD), one in register 0x00 and the other in 0x01, it is necessary to always write to both registers at once when configuring the device.

Auto-Memorization

The VEML6031X00 stores the last measured ambient data before the device is shutdown, keeping the data accessible. When VEML6031X00 is in shutdown mode, the host can freely read this data via read command directly.

| COMMAND REGISTER FORMAT | | | | | |

CALCULATING THE LUX LEVEL

Command code 0x10 and 0x11 contain the results of the ALS measurement. This 16-bit code needs to be converted to a decimal value to determine the corresponding lux value. The calculation of the corresponding lux level is dependent on the programmed gain setting and the chosen integration time.

The component is most sensitive with ALS_GAIN = x2, PD_DIV4 = 4/4 and an integration time of 400 ms, specified to 0.0034 lx/step.

Every time the integration time is halved, the resolution is doubled but also the possible detection range is doubled.

The same principle is valid for the gain setting. For ALS_GAIN = x1 it is doubled. For PD_DIV4 = 1/4 the size of the photodiode is just 1/4, so, also the sensitivity is just 1/4, resolution and max. possible detection range is times 4, to allow for higher illuminations up to about 228 klx.

TABLE 9 - RESOLUTION AND MAXIMUM DETECTION RANGE AT PD_DIV4 = 0 (= x 4/4)

| IT (ms) | GAIN x 2 | GAIN x 1 | GAIN x 0.66 | GAIN x 0.5 | GAIN x 2 | GAIN x 1 | GAIN x 0.66 | GAIN x 0.5 |

TABLE 10 - RESOLUTION AND MAXIMUM DETECTION RANGE AT PD_DIV4 = 1 (= x 1/4)

| IT (ms) | GAIN x 2 | GAIN x 1 | GAIN x 0.66 | GAIN x 0.5 | GAIN x 2 | GAIN x 1 | GAIN x 0.66 | GAIN x 0.5 |
|---------|-----------------------------|----------|-------------|------------|--------------------|--------------------|--------------------|--------------------|
| | TYPICAL RESOLUTION (lx/cnt) | | | | | | | |
| 400 | 0.0136 | 0.0272 | 0.0412 | 0.0544 | 891 | 1783 | 2701 | 3565 |
| 200 | 0.0272 | 0.0544 | 0.0824 | 0.1088 | 1783 | 3565 | 5402 | 7130 |
| 100 | 0.0544 | 0.1088 | 0.1648 | 0.2176 | 3565 | 7130 | 10803 | 14260 |
| 50 | 0.1088 | 0.2176 | 0.3297 | 0.4352 | 7130 | 14260 | 21607 | 28521 |
| 25 | 0.2176 | 0.4352 | 0.6594 | 0.8704 | 14260 | 28521 | 43213 | 57042 |
| 12.5 | 0.4352 | 0.8704 | 1.3188 | 1.7408 | 28521 | 57042 | 86427 | 114083 |
| 6.25 | 0.8704 | 1.7408 | 2.6376 | 3.4816 | 57042 | 114083 | 172854 | 228167 |
| 3.125 | 1.7408 | 3.4816 | 5.2752 | 6.9632 | (-) ⁽¹⁾ | (-) ⁽¹⁾ | (-) ⁽¹⁾ | (-) ⁽¹⁾ |

Note

⁽¹⁾ For integration time of 3.125 ms the maximum count level is no longer 16 bit, so, half the integration time no longer leads to double the max. lux level

Example:

If the 16-bit word of the ALS data shows: 0000 0101 1100 1000 = 1480 (dec.), the programmed ALS_GAIN = x1, PD_DIV4 = 4/4 (= x1) and ALS_IT = 100 ms, the corresponding lux level is: light level (lx) = 1480 x 0.0272 = 40.256 lx.

DRYPACK

Devices are packed in moisture barrier bags (MBB) to prevent the products from moisture absorption during transportation and storage. Each bag contains a desiccant.

FLOOR LIFE

Floor life (time between soldering and removing from MBB) must not exceed the time indicated on MBB label:

Floor life: 4 weeks

Conditions: $T_{amb} < 30\text{ }^{\circ}\text{C}$, RH < 60 %

Moisture sensitivity level 2a, according to J-STD-020.

DRYING

In case of moisture absorption devices should be baked before soldering. Conditions see J-STD-020 or label. Devices taped on reel dry using recommended conditions 192 h at 40 °C (+ 5 °C), RH < 5 %.

Such statements are not binding statements about the suitability of products for a particular application. It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and / or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts. Product specifications do not expand or otherwise modify Vishay's terms and conditions of purchase, including but not limited to the warranty expressed therein.

Hyperlinks included in this datasheet may direct users to third-party websites. These links are provided as a convenience and for informational purposes only. Inclusion of these hyperlinks does not constitute an endorsement or an approval by Vishay of any of the products, services or opinions of the corporation, organization or individual associated with the third-party website. Vishay disclaims any and all liability and bears no responsibility for the accuracy, legality or content of the third-party website or for that of subsequent links.

Vishay products are not designed for use in life-saving or life-sustaining applications or any application in which the failure of the Vishay product could result in personal injury or death unless specifically qualified in writing by Vishay. Customers using or selling Vishay products not expressly indicated for use in such applications do so at their own risk. Please contact authorized Vishay personnel to obtain written terms and conditions regarding products designed for such applications.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document or by any conduct of Vishay. Product names and markings noted herein may be trademarks of their respective owners.
