

Product Feature

- ◆ Universal Input: 85-305VAC / 100-430VDC
- ◆ Operating temperature range: -40°C - +85°C
- ◆ Isolation: 4000VAC
- ◆ The mechanism has input undervoltage protection, output short circuit protection and over current protection
- ◆ Design meet IEC/EN61558、IEC/EN60335

Note:

1. FUSE, EMC protection, and EMI protection are selected based on actual application needs;
2. C1 is a filtering electrolytic capacitor, which is a required component. It is recommended to use ripple current > 400mA@100KHz Electrolytic capacitors.
3. C2, C4, and L1 form a Pi type filtering circuit, and it is recommended to use high-frequency low resistance electrolytic capacitors or solid-state capacitors.
4. When selecting L1, ripple requirements can be considered, while paying attention to current and internal resistance values.

Note:

1. The input voltage cannot exceed the specified range value, otherwise permanent and irreparable damage may be caused;
2. Unless otherwise specified, the parameters in this datasheet were measured at 25°C, humidity 40%~75%, input nominal voltage and output pure resistance mode under full load;
3. All index test methods are based on our company's enterprise standards.
