■ Product Introduction

LM2675 series is a DC/DC switching buck converter controlled by a fixed frequency of 260kHz PWM.It is mainly composed of internal frequency compensation, fixed frequency oscillator, built-in overcurrent protection, power switch control and other circuits. It can drive 1A load with high efficiency, low ripple, good linearity and load adjustment ability.Only a few external components are needed to realize the function of DC/DC voltage reduction and stabilization, which is very simple and practical.PWM control circuit can adjust the duty cycle from 0 according to the load To 100% to achieve high work efficiency.It has an external enabling control opening function, which can realize the controllable switch between standby and work, making the application more flexible.

■ Product features

- ● Built in overtemperature shutdown function
- ● Built in overcurrent protection function
- ● Internal integrated efficient power switch
- ● Good linearity and load adjustment capability
- ● ON/OFF pin with hysteresis function
- ● TTL shutdown capability
- ● high efficiency
- ● Simple periphery
- ● Wide input voltage range: 7V~40V
- ● Fixed output voltage: 3.3V, 5V, 12V, etc
- ● Adjustable output voltage range: 1.21V~37V (adjustable)
- ● High precision output: ± 2%
- ● Fixed switching frequency: 260 kHz
- ● Maximum output current capacity: 1A
- ● Minimum linear drop voltage drop: 1.5V
- ● Package form: SOP-8

■ Product use

- ● LCD and LCD TV
- ● ADSL modem
- ● LED lights, LED backlight
- ● Digital photo frame
- ● Telecommunication/network equipment

■ Packaging form and pin function definition

Pinserial number SOP-8	Pin definition	Function description
1	CB	Boost capacitance terminal
2	NC	Empty port
3	NC	Empty port
4	FB	Feedback control terminal
5	ON/OFF	Enable enable terminal
6	GND	Power supply ground terminal
7	VIN	Positive terminal of power supply
8	VSW	Power switch output terminal (SW)

■ Application circuit
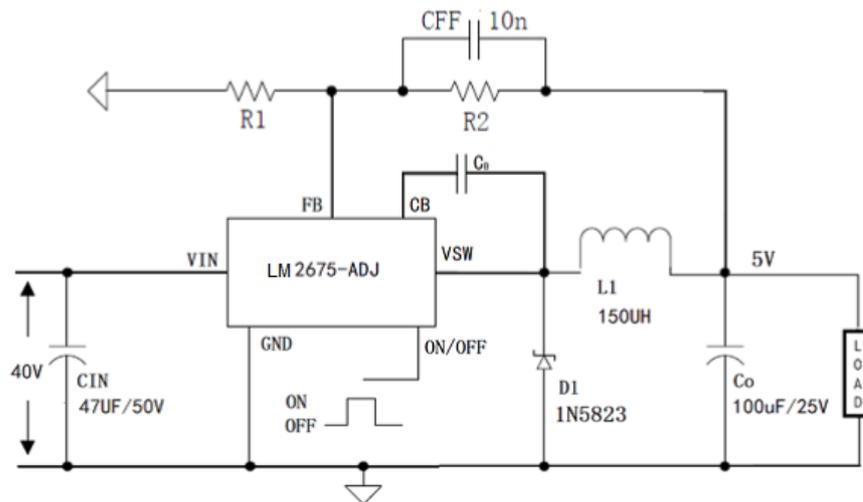

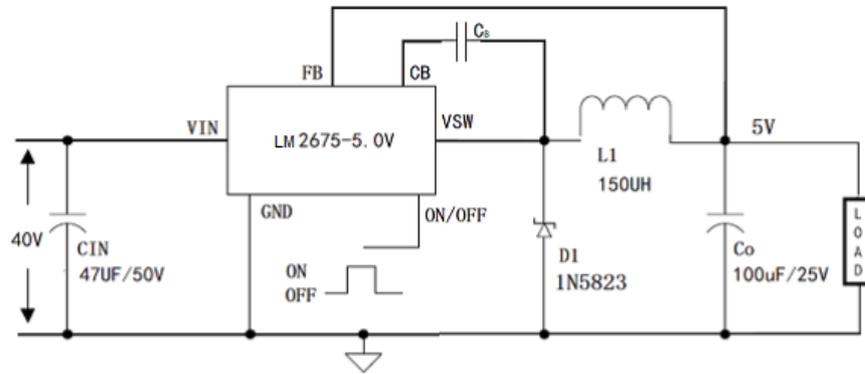

$V_{OUT} = V_{REF} (1+R2/R1)$

C_B :   103/50V

■ Limit parameter

project	Symbol	explain	Limit value	Company
Voltage	VIN	Input terminal voltage	-0.3~42	V
	VFB	FB feedback terminal voltage	-0.3~VIN	V
	V_{VSW}	Switch output terminal voltage	-1~VIN	V
	$V_{ON\text{-}OFF}$	Enable enabling terminal voltage	-0.3~6	V
Maximum power consumption	PD	SOP8 package	500	mW
thermal resistance	R_{JA}	Put in air without external heat sink	30	℃/W
temperature	Tw	Operating temperature range	-20—70	℃
	Tc	Storage temperature range	-40—150	
	Th	welding temperature	260	℃,10s

Note: Limit parameter refers to the limit value that cannot be exceeded under any conditions.Once the limit value is exceeded , it may cause physical

damage such as product deterioration;At the same time, the chip can not be guaranteed to work normally under the limit parameters.
